

GrassMaster Pro

World-Leading Drymatter Instrument

How much Money are you Wasting?

Grass can be a farm's most effective feed input. Poor pasture management decisions can result in up to 30% annual wastage. Minimise these potential losses with the Novel Ways GrassMaster Pro. Accurate pasture measurement helps you make better pasture management and stock feeding decisions. The Result = Lower costs + Higher Profits.

Maximise Pasture Utilisation

- Estimate dry matter yield in kg/hectare (kg/ha) accurately, so that you can ensure the pasture is used at the optimum time.
- Estimate dry matter yield in kg/ha accurately, so that you can ensure animals are neither overfed nor underfed.
- Calculate pasture growth rates so that you can identify better performing paddocks.
- See the real results of pasture renovation and fertilisation in terms of increased pasture production.
- Know exactly what is happening to your pasture growth rates before others can tell 'by eye', and take appropriate management decisions such as selling stock before the market drops.

With the GrassMaster Pro you can avoid...

- Insufficient feed at calving/lambing time = high mortality rate.
- Insufficient average pasture cover in early spring = missing the peak production potential of the farm.
- Tall rank grass in late spring decreasing digestibility = could have been turned into silage.

Specifications:

- Batteries:** Internal rechargeable NiMH battery pack, (Approximately 25hrs continuous use from a single charge).
- Charging/Communications:** USB port on PC or Mains charging adapter.
- Display:** Easy to read backlit LCD (16x2).
